

The Need of the Workshop

Academic, Functional, Therapeutic, Social and Vocational training of individuals with special needs is very diverse and time consuming in nature. The decisions regarding the types of interventions, strategies, methodology to implement in the classroom is generally based on the teacher's knowledge and experience can be restrictive in the true sense. Though some of the indigenous methods of training followed by schools and NGOs have proved successful and have evolved as best practices, the reach is limited. These methods can be replicated by the other centers and thereby economize on time and other resources. Unfortunately, studies have not been conducted to prove the efficacy of the best practices because research is generally considered as an academic activity conducted by academician!

With Evidence based practices gaining grounds all over the world as an approach which is cost effective and less time consuming, it is important for teachers, administrators, and other rehab professionals to be knowledgeable about conducting research to bring forth the indigenous methods to prove or disprove the claims . This workshop will give an insight into the importance of research in the field of special education and also provide them with necessary knowledge to conduct a research study in their own work set up.
